Mr. S. Gale Chapman  
Station Superintendent  
Intermountain Power Project  
Delta, Utah 84624

Dear Mr. Chapman:

On April 21, 1992, I had the opportunity to inspect ongoing burner modifications for one of the IPP units being overhauled. I was also afforded the opportunity to check combustion and coal fire pattern on the other IPP unit. The inspection was an investigation by myself and Project Engineer Gary McFadden to the potential for making similar modifications at the Deepwater Generating Station.

Mr. McFadden and myself were escorted by IPP's Mr. Aaron Nissen. Mr. Nissen provided an excellent history and operating account of the burners. Mr. Nissen was very professional, courteous, and enthusiastic in the tour provided us.

Along with Mr. Nissen, we were also assisted by Messrs. C. James and G. Christensen. These two individuals also were very helpful, courteous and eager to answer questions.

I am appreciative to IPP's allowing our inspection and take this opportunity to thank you and the individuals mentioned above for their time and efforts during the inspection. I congratulate you on maintaining an enthusiastic work force and a clean, efficient generating station.

Yours very truly,

Eric S. Graber
